Professional Summary

Software Engineering graduate/near-graduate who has shipped field-facing desktop features, data tooling, educational content, and ML research. Seeking the Safaricom 6-month Technology/Cyber Security internship (Oct 2026 intake) to contribute to secure, resilient products used by millions.

Education

B.Sc. Software Engineering · Zetech University (2022-2025 expected) · Reg: BSE-05-0192/2022. Result slips for Years 1-4 available (strong C#/ .NET, algorithms, testing, and data analysis foundation).

Professional Experience

- Industrial Attachment · INNODEMS · Apr-Aug 2025: Primary contributor to the Tricot Menu add-on inside R-Instat, blending UI sketches, dialog flows, helper R scripts, and Plackett-Luce pre-processing so agronomists can run triadic comparisons with confidence.
- Coordinated Windows Forms (C#) extensions that strengthened field data capture, orchestrated R scripts from .NET, produced unit/integration tests, and maintained GitHub pull requests plus documentation under ARMSTRONGOPONDO.
- Participated in agile ceremonies, peer code reviews, and knowledge sharing while volunteering at Scratch Day 2025 and contributing CBC Grade 9 Maths and IDEMS Databook regression tests.

Projects & Contributions

- Hybrid Credit Card Fraud Detection: Authored a four-layer architecture blending ingestion, model processing, GPT-4o-mini interpretation, and a Flask dashboard to reduce false positives while surfacing insights.
- Tricot Menu – R-Instat add-on: Delivered UI sketching, dialog implementation, helper transforms, and documentation so extension officers can run tricot analyses inside R-Instat (commits under ARMSTRONGOPONDO).
- FactoShiny Integration Report: Evaluated blocking vs. asynchronous callr-based launches; recommended non-blocking approach plus proof-of-concept steps to maintain responsiveness.
- Document Workflow App documentation: Captured architecture, signature capture UX, approval flows, and deployment notes for a Vite/React/Firebase single-page app.

Technical & Security Skills

- Languages & platforms: C#, Python, R, Flask, Streamlit, React (Vite + TypeScript).
- Machine learning & analytics: TensorFlow, XGBoost, Random Forest, SMOTE, callr, Plotly Dash, Pandas, data preprocessing.
- Development practices: Git, Visual Studio, RStudio, unit/integration testing, agile rituals, documentation, code reviews.
- Security awareness: Cisco Cybersecurity Essentials foundations, DevNet Associate exposure, secure coding attitudes.

Certifications & Recognition

- Cisco Cybersecurity Essentials · Jul 2023
- Cisco DevNet Associate · May 2024
- Udacity Introducing Generative AI · Jul 2025
- NASA Space Apps Challenge Participation · Oct 2025
- Scratch Day 2025 volunteer facilitator

Achievements & Outreach

Contributed matrices chapter to CBC Grade 9 Mathematics, executed IDEMS Databook regression tests, supported INNODEMS field trials, and documented Scratch Day community events for public engagement.
